

# PACKAGING RECOVERY

Recuperolmballi01r1\_E

January 2018

Dear Sirs,

DUCI S.r.l., feels deeply the environmental aspect, therefore we have worked to find suitable packing on the market (polyethylene bags and corrugated boxes) for the eco sustainability:

- avoiding from the beginning the presence of injurious materials;
- trying to reduce as much as possible the quantity in usage;
- using also the ones produced with recycled materials;
- promoting their recovery and their recycle
- and following the concept of the “shared responsibility” i.e. production, usage and recycle of the packing.

The cartoon boxes and the Polyethylene bags can be used many times until they break or become damaged. After the usage the waste-materials is separated from the assimilated ones, so that the recycle operation can be started, all this in a simple daily action that allows their recycle so that they can be again a box or a new bag.

Moreover, the rubbish we are producing and supplying, after usage can be wasted as Dangerous material, in case they had contact with dangerous substances or if not they can be wasted as SPECIAL WASTE not assimilated with the urban rubbish.

These have to be considered only a part of the possible suggestions to make our customer sensitive to the environmental impact in order to cope with the running regulation for the environmental protection and the pollution prevention.

We can live a “lighter” future without the “weight” of the rubbish...

Quality & Environmental Mng
